

COLIN NICHOLSON
Building wealth through shares

EMAIL BULLETIN No 1

November 1999

Coppock Spreadsheets may be downloaded from the Data Files page of my website www.bwts.com.au

To make it easier to understand how Coppock calculated the weighted moving average, I have put all the steps across the top of the spreadsheet. It is this way also for those who will update it by hand. It is easy enough to simplify it by writing one formula for many columns if you wish to do so.

I understand that the following formula will produce the Coppock indicator in Metastock:

```
mov(roc(close,14,%) + roc(close,11,%),10,weighted)
```

The index data to update the spreadsheets are the closing prices for each month.

There is more information on my web site www.bwts.com.au
